

ESPAS, VWO, and VITMO

eScience projects to serve GIRO data

Ivan Galkin

University of Massachusetts Lowell
Center for Atmospheric Research

The logo for the XIV International GIRO Forum (IGF 2014). It features the text "IGF 2014" in a large, blue, sans-serif font. The number "0" in "2014" is replaced by a blue and white globe showing the Americas. The background of the slide is a photograph of the Earth's horizon from space, with a bright sun or light source on the right side, creating a lens flare effect.

XIV INTERNATIONAL GIRO FORUM • 20-23 MAY

Glossary

- **eScience** = computationally intensive science that is carried out in highly distributed network environments
- **Virtual Observatory** = a collection of interoperating data archives and software tools which utilize the Internet to form a scientific research environment
- **ESPAS** = near Earth SPACe data infrastructure for eScience
- **VWO** = Virtual Wave Observatory
- **VITMO** = Virtual ITM Observatory
 - **ITM** = Ionosphere, Thermosphere, Mesosphere

How does it work?

- We write down metadata descriptions
 - ESPAS: ISO O&M data model
 - VxO: SPASE data model
- Metadata points to our resources
 - Various level of detail, down to a single observation
- We receive requests for data and reply to them automatically
- Lots of work for us; plus need to speak 2 more languages

Near-Earth space data infrastructure for e-science

A platform to integrate heterogeneous data from earth's thermosphere, ionosphere, plasmasphere & magnetosphere

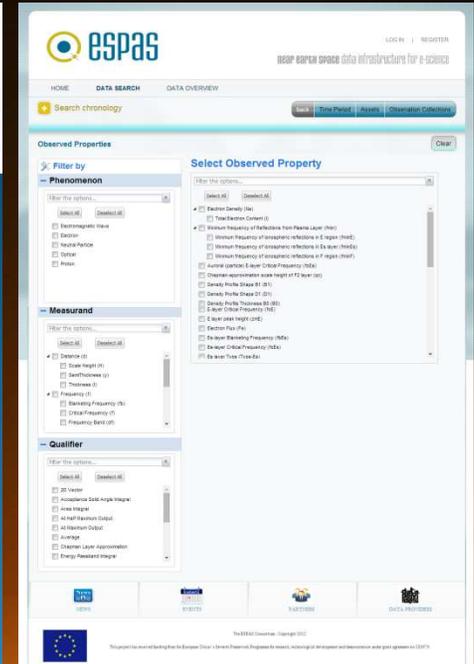

- Supports the systematic exploration of multipoint measurements from the near-Earth space through homogenised access to multi-instrument data
- Provides access to 40+ datasets from : Cluster, EISCAT, GIRO, DIAS, SWACI, CHAMP, SuperDARN, FPI, magnetometers INGV, SGO, DTU, IMAGE, TGO, IMAGE/RPI, ACE, SOHO, PROBA2, NOAA/POES, etc.
- Supports data visualization, search, statistics, modelling

ESPAS User Interface is accessible through

<http://www.espas-fp7.eu>

Next ESPAS release: in October 2013

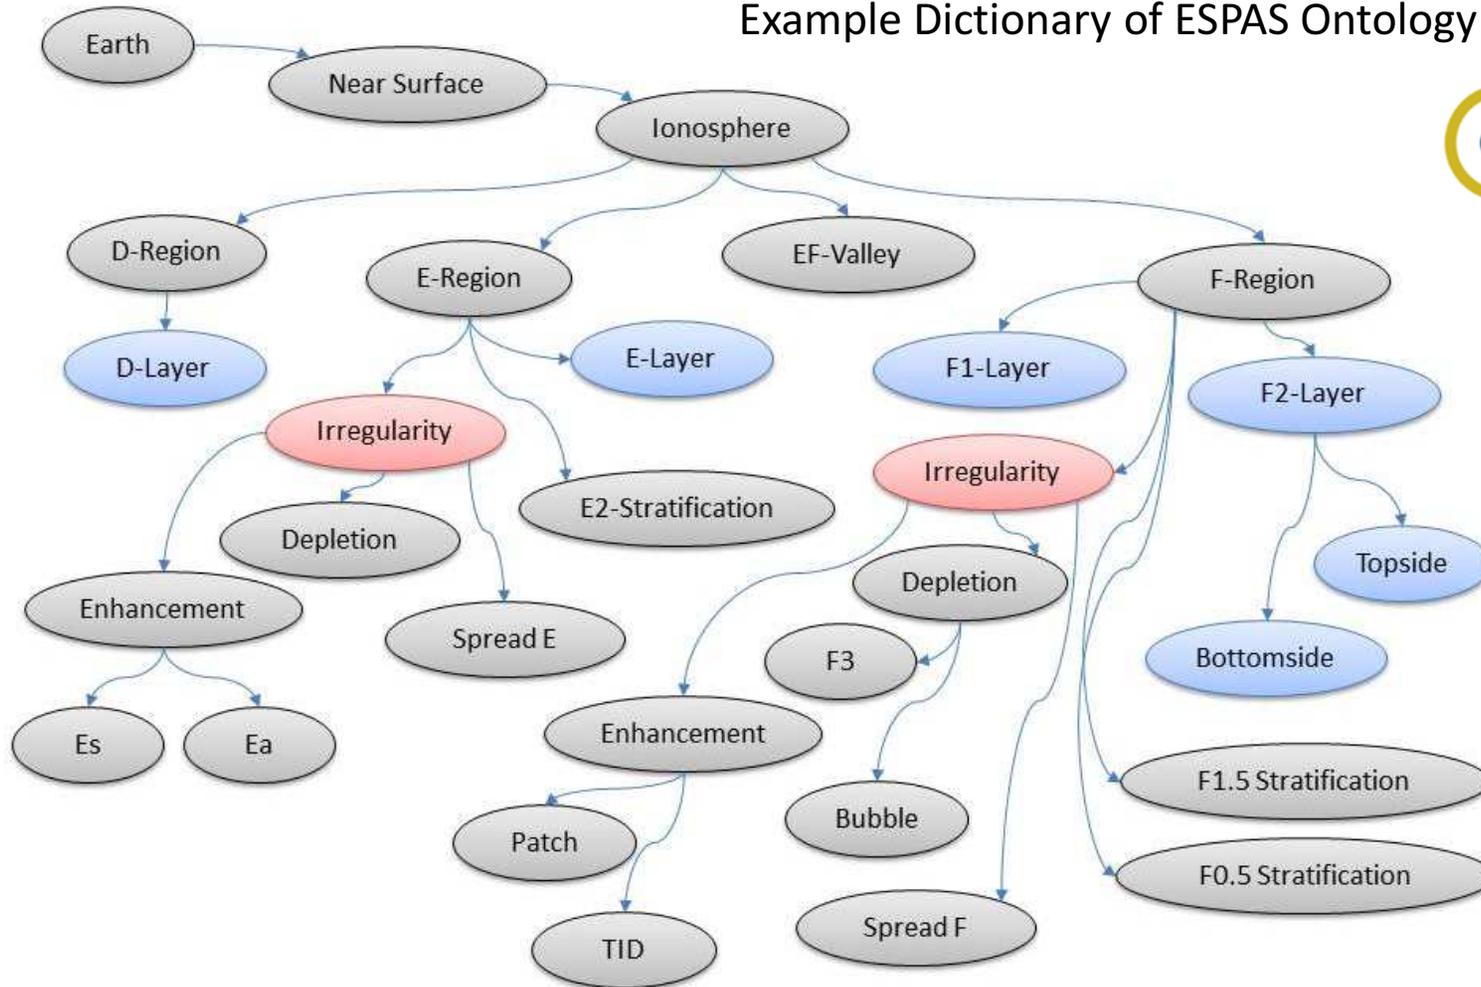

Final ESPAS release: in April 2015

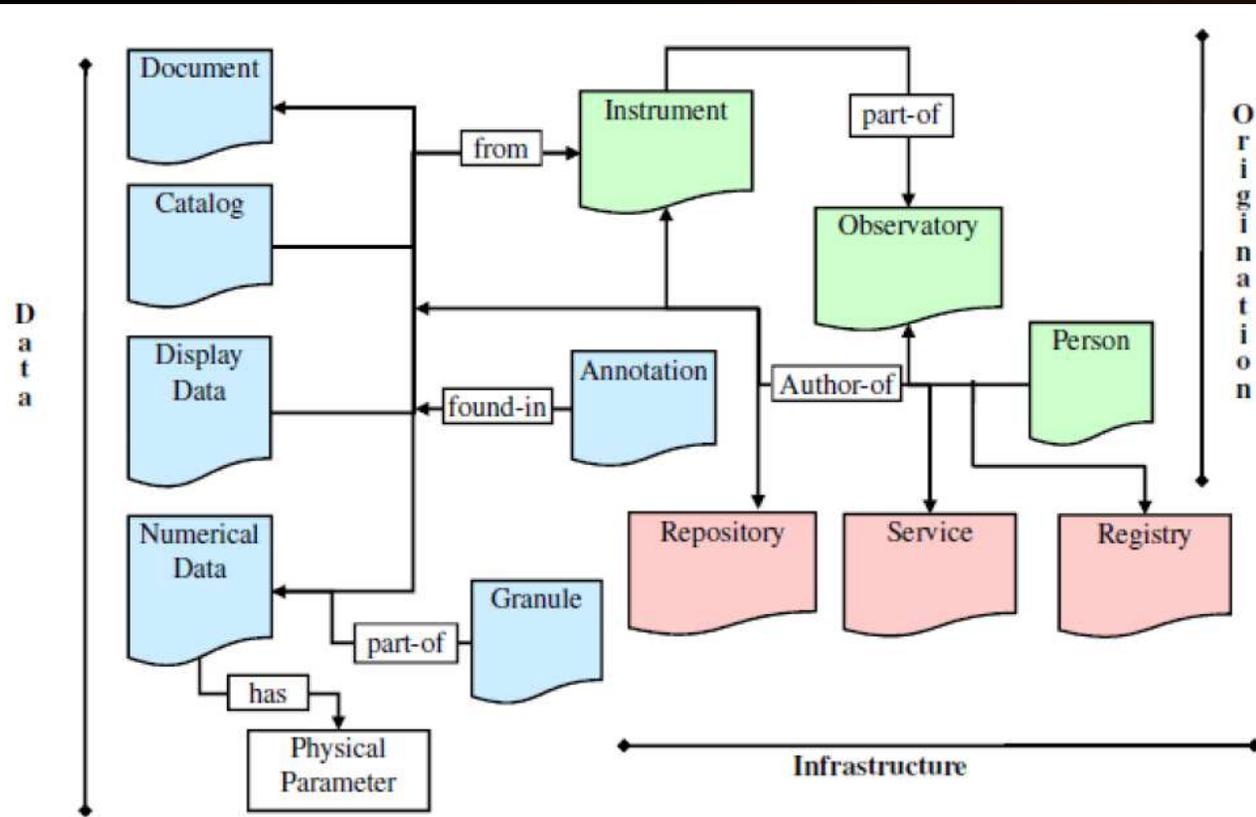

ISO O&M Data Model

Generate results for the following user defined parameter(s):

URSI Station Code:

- foF2 The ordinary wave critical frequency of the highest stratification in the F region (foF2)
- hF2 The minimum virtual height of the ordinary wave trace for the highest stable stratification in the F region (hF2)
- foF1 The ordinary wave F1 critical frequency (foF1)
- hF The minimum virtual height of the ordinary wave trace taken as a whole (hF)
- foE The ordinary wave critical frequency of the lowest thick layer which causes a discontinuity (foE)
- foEa The critical frequency of night time auroral E layer (foEa)
- hF The minimum virtual height of the normal E layer trace (hE)

Selection Overview

Preview Search Results as they are selected (Images, URLs, and timeseries plots & tables) and monitor temporal, regional, & result type coverages in the overall selection set.

PREVIEW OVERVIEW TIMELINE

GIRO Ionospheric Data

```
# Global Ionospheric Radio Observatory
# GIRO Tabulated Ionospheric Characteristics, Version 1.0 Revision B
# Generated by DIDBGetValues on 2014-05-09T18:34:20.086Z
#
# Location: GEO 52.4N 104.3E, URSI-Code IR352 IRKUTSK
# Instrument: Ionosonde, Model: DPS-4
#
# Query for measurement intervals of time:
# 2011-10-24T00:00:00.085Z - 2011-10-24T23:59:59.085Z
#
# Data Selection:
# CS is Autoscaling Confidence Score (from 0 to 100, 999 if manual scaling, -1 if unknown)
# foF2 [MHz] - F2 layer critical frequency
# foF1 [MHz] - F1 layer critical frequency
# foE [MHz] - E layer critical frequency
# hF2 [km] - Minimum virtual height of F2 trace
# zhalfNm [km] - The true height at half the maximum density in the F2-layer
#
```

[Available]

What good is it?

- We place our data into the framework of major eScience projects
 - Greater visibility
 - Additional tools (conjunctions, context search, content search)
 - Potential for great science

Coincidences and Conjunctions

- Scientists like to mix-and-match data from various observatories and instruments
 - eScience is the right environment
- Coincidence: matching by time; conjunction: matching by location
 - Collaborative experiments!
 - Auroral E ionization study
 - RPI+GIRO, COSMIC+GIRO, UV+GIRO, etc.
- What we REALLY need is matching by interesting features
 - We must learn how to answer questions “Do you see anything outstanding at this time?”
 - More about this during presentation “Intelligent Archive Technologies”
