

# Intelligent Archival Technologies

Ivan Galkin

University of Massachusetts Lowell  
Center for Atmospheric Research

IGF 2014

XIV INTERNATIONAL GIRO FORUM • 20-23 MAY

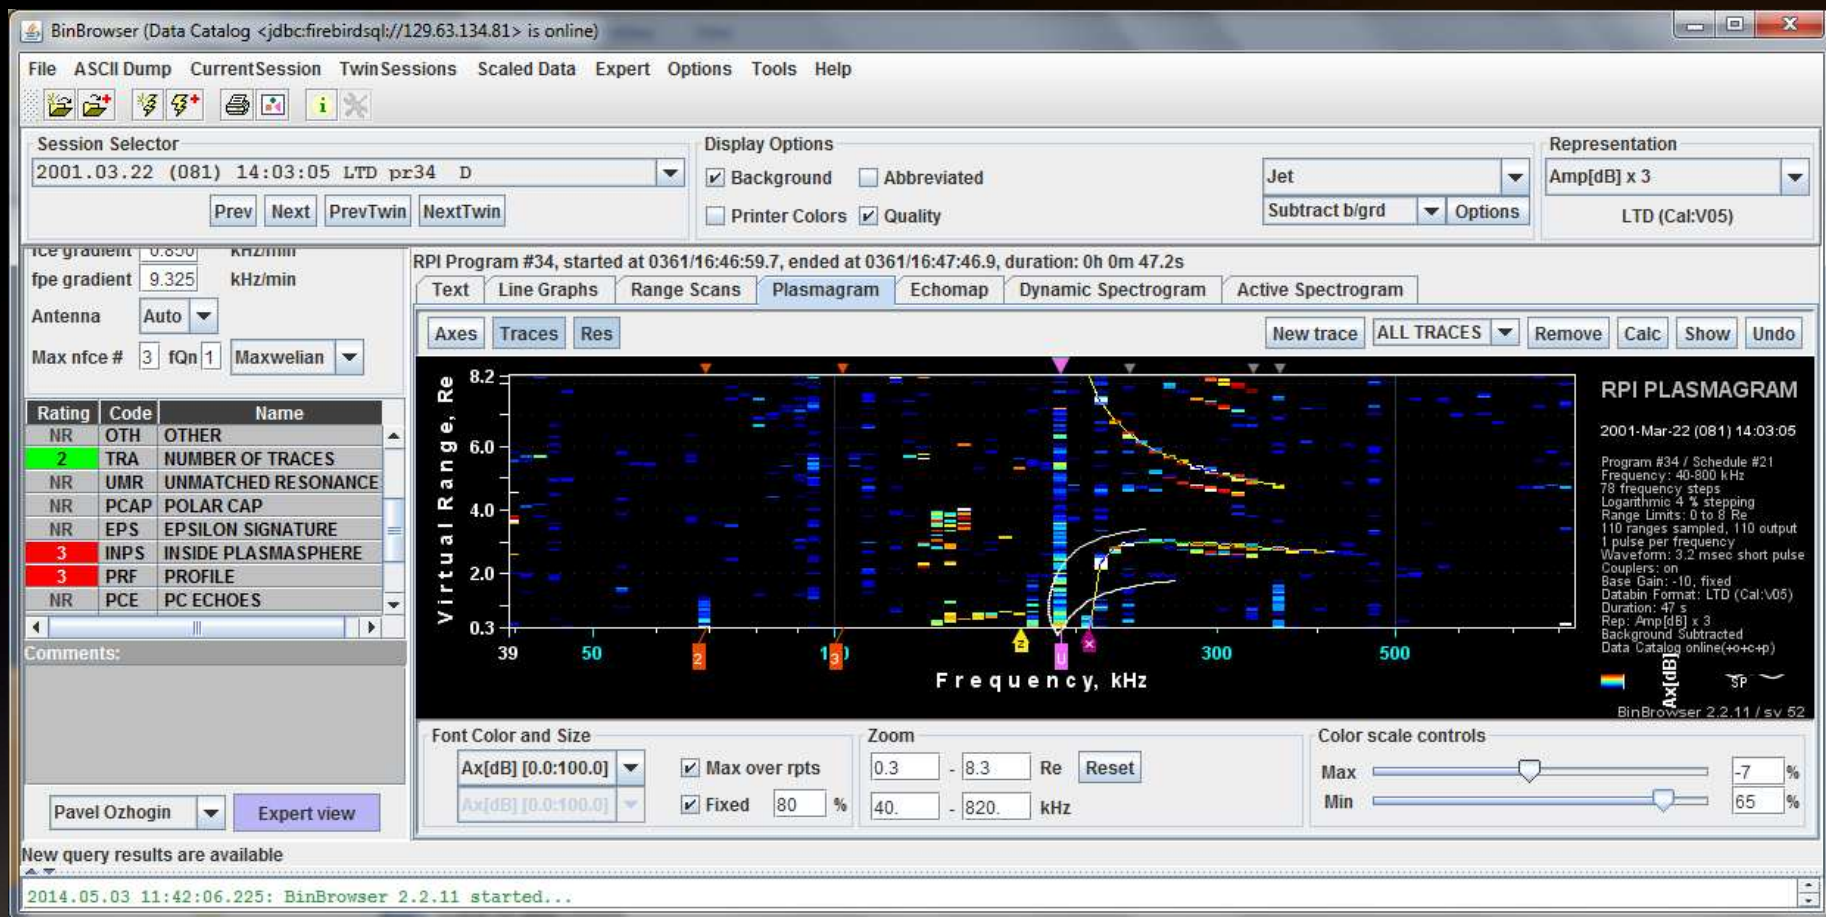

# Background

- **Intelligent Systems (IS)** = A branch of computational science and information technology research that aims to replicate various aspects of human intelligence
- **Intelligent Archives** = data repositories employing IS
  - Many tried but failed...
- **Big Data** = data repositories resisting conventional data search, retrieval, and analysis due to their size and complexity
  - Are we there yet?

# Precursors Worth Further Attention

- Ionogram-derived descriptions of events
  - Auroral E
  - Sporadic E
  - Spread F
  - Deviation from predicted value
- Radio Plasma Imager's "Expert Rating"
  - Manual and automatic interpretation
  - Several event categories
  - Confidence degree

BinBrowser Expert Rating Capability

# Annotation Service

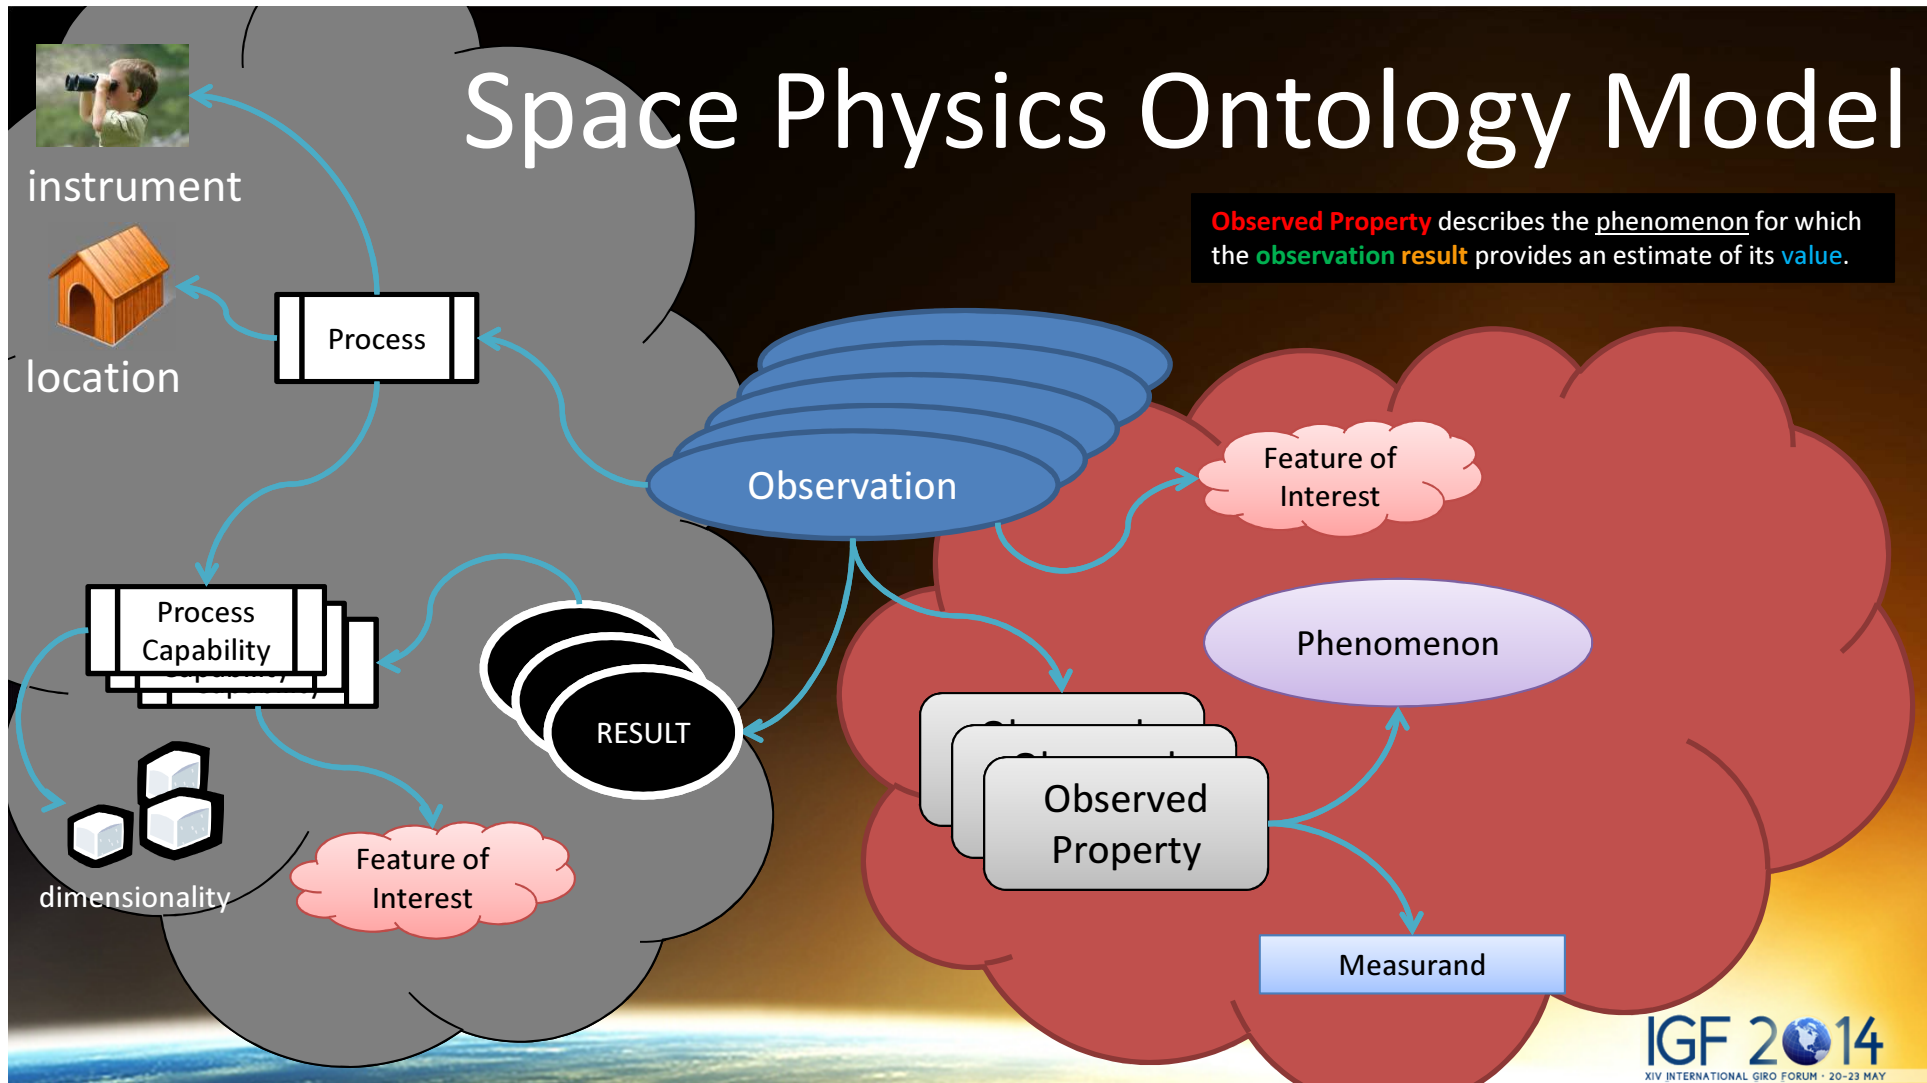

- Place labels on detected events
  - Event vs Phenomenon
- Labels have to be searchable
- Classification system for the events
  - “Dictionary of keywords”
  - Domain ontology

# Space Physics Domain Ontology

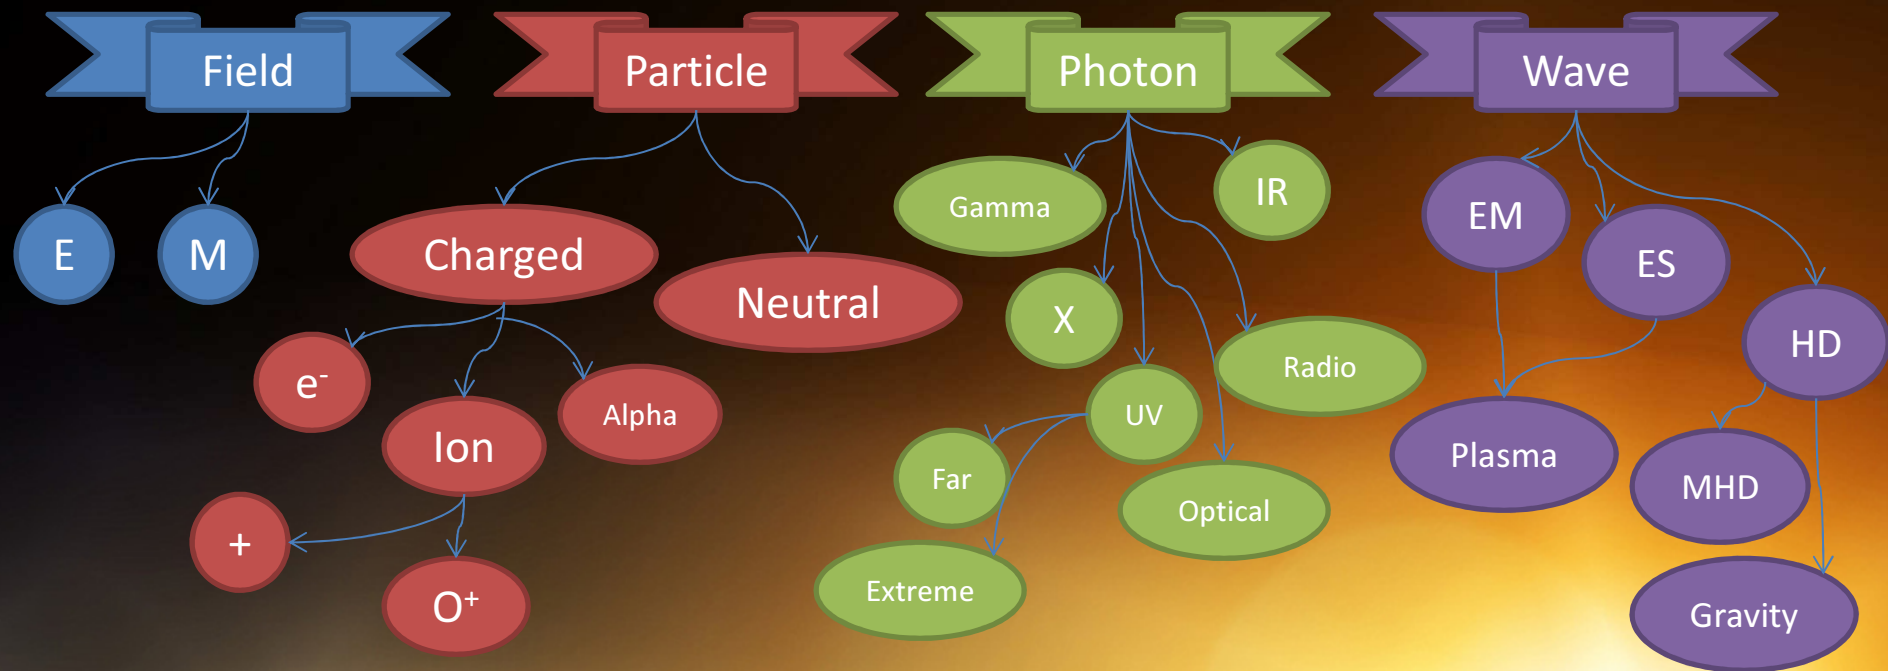

- Previous work is practically non-existing...
- Work at UMLCAR started in 2010
  - VWO
  - ESPAS
- ISO O&M is the founding data model
- Efforts to harmonize with SPASE underway

# Space Physics Ontology Model

# Space Physics Ontology

## Phenomenon Vocabulary
